

Canadian Honey Council

## Requête du Conseil canadien du miel (CCM) Request from the CHC

**Voici, à la demande du CCM le 2 novembre dernier, une invitation à répondre à un sondage dans le but de bien cerner les impacts de la COVID-19 sur la main-d'oeuvre et les stocks d'abeilles pour les entreprises canadiennes et d'agir maintenant pour l'an prochain.**

This short anonymous survey has been developed to assist us in preparation for potential Covid-19 disruptions next year, and we strongly encourage all beekeepers to provide their input. The Canadian Honey Council (CHC) and the Canadian Association of Professional Apiculturists (CAPA) are being proactive in trying to obtain detailed information with regards to how COVID-19 affected labour and bee stocks this year, prior to next year's season. COVID-19 impacted many aspects of operation in commercial and sideliners businesses, and it is extremely important that we have solid information with which to advocate on your behalf.

Without specific information on how your operation was impacted by COVID-19 in 2020, we cannot advocate on your behalf with regulators and policymakers to get access to the support you need to ensure a successful 2021.

**Please take the time to respond** as it will provide much-needed information as we plan ahead to next year's beekeeping season.

<https://bit.ly/3eXw3fy>

**Your email and/or any other personal information provided will never be used/sold/shared, and the data collected in the survey below will remain anonymous with no identifying features.**

Thank you very much for your help.

Respectfully,

Rod Scarlett  
Executive Director  
Canadian Honey Council

Shelley Hoover  
President  
Canadian Association of Professional Apiculturists
